

Environmental policy

For us, it is natural to work for a long-term sustainable society. Through our environmental commitment, we take our shared responsibility for giving future generations the opportunity to experience and enjoy fresh air, clean water, biodiversity, and a living nature.

Everyone within the company takes joint responsibility for the environment and environmental work is an important part of our business. We base our environmental work on that all employees, customers and partners are working for society's long-term development. We are committed to protect the environment and through active environmental work, we prevent the company's negative impact on the environment. We adapt to the environment and streamline our operations in accordance with the laws and requirements placed on us and we always strive to improve our environmental performance by actively working with a life cycle-based and circular thinking.

We will work to reduce the negative environmental impact of business travel by switching to alternative and more environmentally friendly fuels. Furthermore, we will facilitate coordination and streamlining of transports to avoid unnecessary environmental impact.

We will work for resource-efficient and non-toxic cycles by using environmentally friendly products and mapping and reducing our use of chemicals. We will contribute to a better environment by:

- actively work to improve and develop our environmental work in all areas impacting our business.
- the business must live up to all applicable environmental rules and regulations.
- the use of energy and materials must always be efficient.
- work to reduce the amount of waste.
- actively work to coordinate and streamline material transports, and chose the transports having the least environmental impact whenever possible.
- business trips are made as efficiently as possible, from all perspectives.
- never accepting littering of products that are harmful to the environment.
- suppliers must follow applicable environmental laws and regulations.
- work to ensure that stakeholders are informed about our environmental work.
- the environmental policy is communicated to all employees and other stakeholders.
